Off-clot Human Serum, type AB, collected from consented adult donors in a US based FDA licensed Blood Bank. The serum is sterile filtered and sterility confirmed via direct plating.

QUALITY CONTROL: Each lot is tested via PCR and found non-reactive to viral DNA from HIV-1, HIV-2, HTLV I, HTLV II, hepatitis B and hepatitis C. However, no known test can offer complete assurance that the viruses that cause HIV-1, HIV-2, HTLV I, HTLV II, hepatitis B and hepatitis C are not present. Since we cannot test all the pathogens, please treat the culture as a potential infectious reagent.
