## Quality Control Analysis

- **Specificity:** Terminal  $\alpha$ -linked Galactose  
as assessed by Enzyme Linked Lectin Assay (ELLA).
- **Purity Analysis:** Highly purified (>98%). Homogeneous as determined by:
  - SDS PAGE analysis using Coomassie Blue detection.
  - Gel Permeation Chromatography.
- **Percentage Activity:** >98% as assessed by affinity chromatography.

## Usage Guidelines

- Typically utilized in ELLA prepared by dilution in Tris Buffered Saline (pH7.6).
- RPL activity requires metal ions. Buffers must therefore be supplemented with 1mM CaCl<sub>2</sub>, MgCl<sub>2</sub> and MnCl<sub>2</sub>.
- RPL typically diluted to working concentration of  $\leq 5 \mu\text{g.mL}^{-1}$  with TBS and incubated for a minimum of 30 minutes prior to use to allow metal complexation.
